

# NAVIGATOR

**NAVIGATOR is a next-generation cloud-based tool that enables businesses to manage their cyber maturity, achieve and maintain cyber resilience and compliance and reduce audit overheads.**

In any business, cyber security is about ensuring the confidentiality, integrity and availability of the information and systems upon which a business relies to operate.

Understanding how mature your cyber posture is and where you are on that journey is the critical first step to identifying the gaps and resolving them; assessing your defences continuously ensures you are on the front foot. Outdated governance, compliance spreadsheets and systems are no longer efficient.

With businesses working with finite budgets, determining where to allocate spend to reduce risk exposure and drive return on investment is also critical.

## SOLUTION OVERVIEW

**NAVIGATOR is cyber maturity management reimagined. Visualise cyber maturity and compliance levels across your business at the touch of a button, whether from an aerial view or drilling down to a single control.**

To successfully manage cyber risk, it is first necessary to understand it. ITC begins by assessing the current cyber maturity of your business, across technology, people and governance.

Cyber assessments are performed using ITC's blended methodology, a curated set of recommended controls and industry best practice. Customers can select from industry recognised standards such as NIST CSF, ISO-27001 and CIS Top 20, with the flexibility to create and add additional frameworks to fit specific needs and use cases.

NAVIGATOR provides a visualisation of the assessment outcome and the ability to track progress against remediation actions, enabling you to maintain a continuous approach to improving cyber security controls.

Furthermore, customers are provided with integration into ITC's platform ecosystem of existing managed services, delivering end to end cyber security.

**Determine where you are on your cyber maturity journey, identify where key gaps exist and track mitigation and ultimately, deliver return on investment.**
