ITC Secure is an advisory-led cyber security services provider and Microsoft Solutions Partner with designations in Security, Modern Work, and Infrastructure. Our mission is to make the digital world a safer place to do business. We deliver this through three complementary service lines: our Cyber Advisory strategic guidance, our Technical Consultancy professional services, helping customers build credible controls, and our 24x7x365 Managed Services oversight, delivering our MXDR solution powered by Pulse*.

*Pulse is ITC's service delivery platform that combines human-in-the-loop expertise, best-in-class methodologies and automated processes. ITC's MXDR solution utilises Microsoft Sentinel and Defender.

Customer Case Study: Park Square Capital

Business Problem

- PSC intend to be leaders in credit investment within Europe resiliently, securely, and efficiently. The firm had undertaken a significant cloud transformation migrating from traditional datacentres to Microsoft Azure. In addition, PSC chose to deploy Microsoft E5 to benefit from the full suite of Microsoft services.

Solution

- PSC commissioned ITC to conduct an in-depth assessment of the firm's cyber security posture. From the findings, PSC asked ITC to design, build and run a managed security service that was capable of most effectively securing the firm's new cloud infrastructure and operating model.

Outcome

- PSC was able to demonstrate to its stakeholders, both internal and external, that the firm had made investments to help ensure that its data was held securely.

Customer Case Study: Honey Baked Ham

Business Problem

- HBH had a legacy Active Directory Federation Services (ADFS) farm serving a small number of applications. There was very little in the way of Azure AD services being utilised properly and legacy / basic authentication was still a problem. Azure AD Connect service(s) were also in need of upgrade & resilience improvements.

Solution

- HBH engaged ITC consultants to deliver workshops, including a deep dives on: Office 365 Security, Azure AD MFA, CA and Identity Protection. We also drove application migration planning from ADFS to Azure AD and Azure AD Access Packages and Access Reviews to support the Managed XDR service provided by ITC.

Outcome

- Straight-forward path to reduction of complexity from competing incumbent vendors has allowed HBH to maximise on their F5/E5 investment quickly (within days!) to strip out redundant technologies now serviced by Microsoft.

Best way to Engage

By Territory

- MCI workshops
- 1:1 planning and discovery
- Joint target customer planning
- Joint MS/ITC events, call-outs etc

By Scenario

- Azure and multi-cloud security discovery, planning and deployment
- Compliance & audit breach or issues – discovery, planning and deployment
- Identity consolidation, discovery, planning and deployment

By Workload

- Security solutions
- Compliance solutions
- Identity solutions
- CISO services
