VULNERABILITY INTELLIGENCE

To understand the cyber threat to your business and to be able to take control of, and manage the level of risk, it's essential that you know where you are most vulnerable to attack.

UK businesses face hundreds of malicious attempts to break their cyber defences every day and nearly half of all UK firms have suffered breaches or attacks in the last 12 months.

However, research highlights that only a small number of the millions of threats each year go on to be exploited and result in damaging attacks. Recognising which of these threats you need to prioritise is the biggest challenge, draining budgets, consuming resources and potentially causing reputational and financial damage.

CYBER VULNERABILITY – SOME SIMPLE QUESTIONS

Each and every day your organisation is bombarded by cyber threats, over 600 a day according to the latest estimates. It is therefore essential your business understands precisely how and where you are most vulnerable. The simple questions below should help you identify whether your business is at risk from cyber threat. If you're unable to answer any of the following questions, your business and its reputation may be under greater threat than you realise.

Do you know where all your key data is stored? - And how protected are your customers' details?

What's on your network? - And do you have visibility of every system?

Do you have an effective patching process? - And how do you decide what should be patched first?

Can you quickly assess systems affected by major vulnerability announcements? - And how do you prioritise your responses?

Do you know your overall exposure to cyber attacks? - And are you up-to-speed on detecting insider threats?

ITC's Vulnerability Intelligence services will identify your overall exposure to cyber attacks and ascertain the dangers inherent in your network. Our first step is always to understand your business, learn about your current IT environment and your approach to cyber security.

In doing this, we can provide visibility of disparate systems and applications, identify your critical data, show you where you are most vulnerable and review the effectiveness of your current patching process. Ultimately, we'll monitor all threats and let you know which should be prioritised.

Integrate ITC Vulnerability Intelligence into your existing security infrastructure. Whether you're looking for a new cyber security solution, enhancing existing systems or establishing managed services, talk to us about how we can integrate and improve your cyber defence and vulnerability intelligence.

OUR PROVEN APPROACH TO VULNERABILITY INTELLIGENCE FOLLOWS A STRAIGHTFORWARD PROCESS THAT BREAKS INTO THREE STAGES.

1) Visibility

This includes: a full asset capture through discovery scans; development of a asset model; complete visibility of infrastructure, systems and applications; regular scans of used and un-used address space; and proactive scans against major global outbreaks.

2) Prioritisation

This is risk-based and aligned to your business to provide actionable output, with straightforward reports and dashboards. It also provides performance trending and analysis, enabling us to highlight exploitable attack vectors.

3) Consistency

We ensure a repeatable, mature process and procedures, built to ISO20000:1 standards, together with customised reporting, providing straightforward visualisation of your IT estate on a fully managed platform.
ABOUT ITC SECURE

ITC Secure is an advisory- led cyber security services provider and a Microsoft Solutions Partner with designations in Security, Modern Work, and Infrastructure.

The company has a 25+ year track record of delivering business-critical services to over 30 global blue-chip organisations, bringing together the best minds in security, a relentless focus on customer service, and advanced technological expertise to help businesses succeed.

With its integrated delivery model, 24x7 fully managed state-of-the-art Security Operations Centre, and customer-first mindset, ITC works as an extension of its customers' teams to accelerate their cyber maturity –safeguarding their digital ecosystem, securing their business, and their reputation.

ITC serves organisations from its locations in the UK and US with a world-class team of cyber consultants, technical designers, and cyber experts.
