

## Overview

CybSafe, is a strategic partner of ITC Secure. It is a cloud-based human risk management platform that reduces organisational risk by improving people's security decisions and behaviours. Underpinned by SebDB, the world's most comprehensive security behaviour database, CybSafe is a trusted solution for security teams aiming to measure, understand, and influence specific security behaviours seamlessly within the modern tech stack.

CybSafe provides:

1. Personalised, scientific **security awareness guidance, nudges and training** for employees.
2. Scientifically-designed **phishing simulations and user support** to counter phishing and ransomware.
3. Security **behaviour measurement and human risk analytics**.

CybSafe's vision is for a world in which everyone uses technology confidently and safely.

Software that is self-optimising and delivers personalised interventions that challenge attitudes and positively influence security behaviours and decision making.

All powered by **scientific behaviour change micro-experiments**, and a reporting engine that delivers **incredible risk and security posture insights**.

CybSafe want to see a world where all of this is sat within a context of adaptive human protection and risk management.

People, processes, and technologies working together to detect and anticipate human security behaviours and adjust policies, guidance, training, and technologies to protect people in a way that requires minimal effort.

## FAQs

### What customer data is stored by CybSafe?

The highest level of data held by CybSafe is Personal Data. For the specific data points collected, please visit their [Privacy Policy](#).

### How does CybSafe help with GDPR and regulatory compliance?

CybSafe is a [GCHQ-accredited](#) means of reducing the risk of a breach. Implementing and using CybSafe is an easy way to demonstrate to regulators that positive steps are being taken to improve resilience and avoid breaches.

### How do I get people to actually use CybSafe?

CybSafe shifts security perceptions from burden to priority, delivering short, contextualised modules that foster positive secure behaviours. Users engage at their own pace, and Nudges and Alerts seamlessly integrate into existing systems for enhanced engagement. Simulated attacks increase security awareness, while administrators access advanced analytics to track progress and identify areas needing support.

### Which integrations does CybSafe support?

Their full list of integrations can be found [here](#).

### Can we add our own branding to the platform?

Yes.

### Can I customise the training?

Yes. Phishing campaigns and learning are customisable.

### How long will it take to get up and running?

Initial set up: 1 hour. Collect human risk data: 1 day.

### Does CybSafe support multiple languages?

CybSafe currently supports 20+ languages, full list [here](#).
