

MICROSOFT SECURITY DISCOVERY

The Microsoft Security Discovery is designed to guide organisations through the intricacies of transitioning to a unified Microsoft security portfolio. This workshop provides a thorough assessment of your current security landscape, identifying key challenges and inefficiencies inherent in disparate security tools.

Consolidation challenges.

In today's complex digital landscape, organisations are increasingly motivated to consolidate their security tooling to Microsoft for several compelling reasons. Firstly, the integration of various security solutions into a unified Microsoft ecosystem provides a cohesive approach to protecting assets. This consolidation not only enhances the efficiency of security measures but also simplifies management, allowing for a more streamlined and resilient security posture.

One of the primary challenges organisations face with disparate security systems is the lack of interoperability. When tools from multiple vendors are used, it often leads to fragmented data, inconsistent security policies, and increased vulnerability due to gaps in coverage. This fragmentation can hinder the ability to respond swiftly to threats and can complicate the security management process, demanding more resources and expertise to maintain.

Additionally, the drive to reduce costs is a significant factor in the push towards consolidation. Maintaining separate systems often entails higher licensing fees, training costs for diverse platforms, and the need for specialised personnel to manage each tool. By migrating to a comprehensive Microsoft solution, organisations can realise considerable cost savings through reduced overheads and more predictable budgeting.

A cohesive approach.

The Microsoft Security Discovery is aimed at helping organisations optimise their transition to a unified Microsoft Security Stack. This process provides a thorough assessment of your current security landscape, identifying key systems for consolidation and inefficiencies inherent in disparate systems. Our team of experts will work closely with your IT staff to map out a customised security adoption roadmap, tailored to your organisation's unique needs and objectives. This roadmap will outline the step-by-step process required to achieve a consolidated and robust security infrastructure, leveraging Microsoft's comprehensive suite of security solutions.

The workshop begins with an in-depth discovery, where we analyse your existing security tools and processes. We then facilitate a session to help you understand the benefits of integration within the Microsoft ecosystem, highlighting how it can enhance your security posture while streamlining management complexity and reducing costs. By the end of the assessment, your organisation will have a clear, actionable plan to achieve a more secure and efficient digital environment.

Get started today.

Discover

- Discovery of your current tooling and areas to be considered for consolidation.
- Technical considerations to overlap between different tooling.
- A 2-hour session(s) with an ITC cloud security consultant to understand your current challenges and to build the foundations for a roadmap.
- Technical concerns/approaches can be explored with your team ahead of any consolidation decisions.

Plan

- A tailored plan is mapped out based on the findings of the discovery.
- Included is a total cost of ownership calculation to guide customers on potential long-term cost savings.

Review

- You will receive a Post-Discovery Report (PDR) following the discovery exercise.
- ITC will review the PDR with you to ensure it accurately portrays your business needs and consolidation requirements.

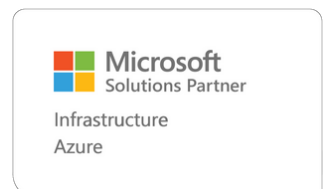

If you'd like to speak to one of our security experts or book an assessment, please email us at enquiries@itcsecure.com, call 0207 517 3900 or get in touch [here](#).

About us.

ITC Secure (ITC) is an advisory-led cyber security services provider and a Microsoft Solutions Partner with designations in Security, Modern Work, and Infrastructure.

The company has a 25+ year track record of delivering business-critical services to over 300 global blue-chip organisations, bringing together the best minds in security, a relentless focus on customer service, and advanced technological expertise to help businesses succeed.
